EDUCATION

B.S. in Computer Science, Minor in Economics

Expected May 2028

University of South Florida

GPA: 3.87

Relevant Coursework: Programming Concepts, Program Design, Data Structures

SKILLS

Programming	Python, JavaScript, C/C++, HTML/CSS, SQL.
Tools and Platforms	Git, GitHub, AWS, PostgreSQL, Docker.
Frameworks and Libraries	LangChain, LangGraph, React, Node.js, Apache Iceberg, PySpark, FastAPI.
Languages	Portuguese (native), Spanish (fluent).

EXPERIENCE

Tech Lead — IEEE Computer Society, University of South Florida

May 2026 - Present

Technical Leadership, Web Development, and Event Coordination

Tampa, FL

- Lead technical initiatives for a student organization with 1,000+ members, supporting web development, technical programming, and event operations.
- Plan, organize, and present software-focused technical workshops for students and club members.
- Develop and maintain the IEEE Computer Society at USF and TechX websites while supporting the planning and execution of TechX Florida, an annual technology conference with 300+ attendees.

Tech Specialist — BRASA Connect, University of South Florida

July 2026 - Present

Web Development,

Tampa, FL

- Build and maintain web and backend features supporting participant management, mentorship, recruiting, and conference operations.
- Contribute to the migration of BRASA Connect's infrastructure from Firebase to AWS, supporting the modernization of systems serving a conference with 300+ attendees.
- Develop and improve the organization's internal operations portal, used by team members to manage participant data, execute administrative scripts, and access internal tools.

Data Engineering Intern — FHE POUPEX

June 2026 - July 2026

Data Engineering, Data Science, and Agentic Development

Brasília, Brazil

- Developed a data warehouse and lakehouse ETL pipeline using Python, PySpark, PostgreSQL, Apache Iceberg, and Project Nessie, implementing Bronze, Silver, and Gold data layers and dimensional modeling.
- Implemented fact/dimension tables and SCD Type 1 and 2 transformations to support historical data tracking and analytical workloads.
- Built an agentic banking chatbot using LangChain, LangGraph, FastAPI, Ollama, and PostgreSQL, integrating specialized AI agents, tool-based database retrieval, routing, and conversation persistence.
- Containerized and integrated the solution with Docker Compose, connecting LLM, backend, frontend, and database services in a multi-service architecture.

PROJECTS

NovaBay — 2026 HackUSF Climate Teach-In Challenge winner project

- Developed a full-stack GIS dashboard using React and Node.js, integrating MapLibre and deck.gl with a Supabase backend to provide seamless, interactive visualization of complex coastal parcel and flood zone data.
